# Personal Financial Literacy 

## Unit Overview

Being financially literate means taking responsibility for learning how to calculate income taxes on wages and how to create a budget to plan your spending and savings. Using a budget estimator will help you look at monthly earnings and expenses. You will also learn how to look ahead to long-term savings for future needs. Creating a net worth statement will help you see how families evaluate how well they're doing on their financial goals. As you continue through the unit, you will apply what you have learned to solve real-world financial problems.

## Key Terms

As you study this unit, add these and other terms to your math notebook. Include in your notes your prior knowledge of each word, as well as your experiences in using the word in different mathematical examples. If needed, ask for help in pronouncing new words and add information on pronunciation to your math notebook. It is important that you learn new terms and use them correctly in your class discussions and in your problem solutions.

## Academic Vocabulary

- income tax
- property tax
- budget
- variable expense
- assets
- compound interest
- coupon
- sales tax
- take-home pay
- fixed expense
- net worth
- liabilities
- monetary incentive
- rebates

## ESSENTIAL QUESTIONS

How does being financially literate help you manage your money?

How can you plan ahead for future financial goals?

## Getting Ready

Write your answers on notebook paper. Show your work.

1. Write the letter of each pair of fractions that are equal.
a. $\frac{2}{3}$ and $\frac{4}{5}$
b. $\frac{5}{8}$ and $\frac{10}{16}$
c. $\frac{3}{7}$ and $\frac{7}{15}$
d. $\frac{2}{5}$ and $\frac{5}{10}$
e. $\frac{3}{5}$ and $\frac{9}{15}$
2. Write an equivalent fraction with a denominator of 100 for each fraction.
a. $\frac{6}{20}$
b. $\frac{2}{5}$
c. $\frac{1}{4}$
d. $\frac{36}{25}$
e. $2 \frac{3}{5}$
3. Write each percent as a decimal.
a. $4.7 \%$
b. $3.2 \%$
c. $5.8 \%$
d. $19.6 \%$
4. Multiply. Describe any pattern you notice.
a. $6.2735 \times 10$
b. $6.2735 \times 100$
c. $6.2735 \times 1000$
5. Divide. Describe any pattern you notice.
a. $87.345 \div 10$
b. $87.345 \div 100$
c. $87.345 \div 1000$
6. Divide.
a. $\$ 40.20 \div 12$
b. $\$ 500.50 \div 0.50$
c. $\$ 105.3 \div 2.7$
7. Explain how fractions and decimals are related.

## Budgeting and Money Management

## How Much Is Too Much?

Lesson 27-1 Understanding Earnings and Budgets

## Learning Targets:

- Examine taxes on wages earned and on purchases.
- Analyze a family budget and calculate percentages for each part of a budget.

SUGGESTED LEARNING STRATEGIES: Close Reading, Marking the Text, Summarizing, Create Representations

Learning to manage your money is a skill that you will use throughout life. As you get older, you will start earning money and paying taxes. Among the three major taxes that many people pay are income taxes, sales taxes, and property taxes.

1. The following table shows the median weekly earnings for people with different levels of schooling. Complete the table by calculating the increase in weekly income with each additional level of education.

| Education Level | Median Weekly <br> Income (2011) | Increase <br> (in dollars) |
| :--- | :---: | :---: |
| Less than high school diploma | $\$ 451$ | - |
| High school graduate | $\$ 638$ |  |
| Some college, no diploma | $\$ 719$ |  |
| Associate degree | $\$ 768$ |  |
| Bachelor's degree | $\$ 1053$ |  |
| Master's degree | $\$ 1263$ |  |
| Doctoral or professional degree | $\$ 1551-1665$ |  |

2. What is the median increase in weekly income between a high school degree and a college (bachelor's) degree?
3. Apply mathematics to everyday life. Suppose a family earns total wages of $\$ 800$ a week and pays state income taxes of $5 \%$ on annual earnings.
a. How much money will the family pay as state income tax?
b. Suppose the local government taxes income at $1 \%$. How much additional money will the family pay in taxes to the local government?
c. What amount of money is left after taxes are paid?

## My Notes

## ACADEMIC VOCABULARY

An income tax is a percent of earnings paid to federal, state, or local governments. A sales tax is a percentage of the cost of a purchase. A property tax is a percentage of the value of the property owned.

## MATH TIP

Remember that a median is the middle number in a range of values.

## My Notes

## CONNECI TO LAW

Some states do not require its residents to pay state income taxes. Currently those states are Texas, Florida, Washington, Tennessee, New Hampshire, Nevada, South Dakota, Wyoming, and Alaska.

ACADEMIC VOCABULARY
Take-home pay is the amount of money an employee receives in a paycheck. In addition to taxes, other amounts may be withheld for health insurance and contributions to retirement savings.

A budget is an estimate of expected income and expenses.

Most people are also required to pay federal income taxes. Three types of taxes are paid to the federal government based on earnings:

- Income tax, which is a percentage of total earnings
- Social Security tax, which is currently $6.2 \%$ of earnings up to $\$ 113,700$
- Medicare tax, which is $1.45 \%$ on all income.

Tax rates can change as lawmakers pass new laws. The following table shows current income tax rates. Employers withhold income taxes, plus Social Security and Medicare taxes, from employees' paychecks.

| Tax Bracket | Married Filing Jointly | Single |
| :---: | :---: | :---: |
| $10 \%$ Bracket | $\$ 0-\$ 17,000$ | $\$ 0-\$ 8,500$ |
| $15 \%$ Bracket | $\$ 17,001-\$ 69,000$ | $\$ 8,501-\$ 34,500$ |
| $25 \%$ Bracket | $\$ 69,001-\$ 139,350$ | $\$ 34,501-\$ 83,600$ |
| $28 \%$ Bracket | $\$ 139,351-\$ 212,300$ | $\$ 83,601-\$ 174,400$ |
| $33 \%$ Bracket | $\$ 212,301-\$ 379,150$ | $\$ 174,401-\$ 379,150$ |
| $35 \%$ Bracket | Over $\$ 379,150$ | Over $\$ 379,150$ |

People who work are paid hourly wages or a salary. The current federal minimum hourly wage is $\$ 7.25$ per hour. Some states have increased this minimum. People who are paid a salary receive a fixed amount per year rather than an hourly wage.
4. If you earned $\$ 54,000$ a year, what tax bracket would you be in?
5. If you earned $\$ 9.80$ an hour, how much would you make for a 40 -hour week? A year? What federal income taxes would be withheld?
6. The money that is left after taxes are withheld is called take-home pay. Calculate the income taxes, Social Security taxes, and Medicare taxes you would pay on earnings of $\$ 54,000$. What is the take-home pay?

Many people create a budget to manage current income and expenses, while also planning ahead for long-term financial goals. By writing down income and expenses, people can avoid spending more money than they earn each month. Look at the sample budget on the next page. It is made up of income, expenses, and planned savings. This monthly budget is based on take-home earnings for two wage earners.

## Monthly Budget

Income (annual take home of \$64,646):

Salary/wages (take-home pay) 5,388
Other (bank account interest)
Total monthly income
xpenses:
Housing (mortgage/rent) 1080
Property tax (if not included in mortgage) 385
Insurance (home, car, life-medical not 200
withheld by employer)
Food (groceries) 970
Utilities (electricity, water, gas, trash collection) 230
Cell Phones 128
Cable/internet/land line phone bundle 145
Gasoline for car(s) 210
Child care expenses (day care, tuition, etc.) 400
Pet expenses (food, grooming, and veterinarian care) 0
Credit card charges/payments (average monthly) 410
Entertainment costs (movies, meals, hobbies, etc.) 300
Gifts/Charitable donations 100
Other: $\quad 0$
Total expenses $\quad 4558$

Savings:
Emergency fund 100
Retirement savings 340
College savings $\underline{450}$
Total savings 890
7. What is the amount of total monthly income?
8. What is the amount of total expenses?
9. For each expense, calculate its percentage of total expenses. For example, the housing cost of $\$ 1080$ is $24 \%$ of total expenses (rounded to the nearest whole percent).
10. Which expenses take up the largest share of the budget?
11. What proportion of total take-home pay is saved by this family?

## My Notes

## ACADEMIC VOCABULARY

A fixed expense is one that does not change over a period of time. A variable expense, varies-or changes-over time.

|  |  |  |  |  |  |  |  |  |  |  |  |
| :--- | :--- | :--- | :--- | :--- | :--- | :--- | :--- | :--- | :--- | :--- | :--- |
|  |  |  |  |  |  |  |  |  |  |  |  |

|  |  |  |  |  |  |  |  |  |  |  |  |
| :--- | :--- | :--- | :--- | :--- | :--- | :--- | :--- | :--- | :--- | :--- | :--- |
|  |  |  |  |  |  |  |  |  |  |  |  |

|  |  |  |  |  |  |  |  |  |  |  |  |
| :--- | :--- | :--- | :--- | :--- | :--- | :--- | :--- | :--- | :--- | :--- | :--- |
|  |  |  |  |  |  |  |  |  |  |  |  |

|  |  |  |  |  |  |  |  |  |  |  |
| :--- | :--- | :--- | :--- | :--- | :--- | :--- | :--- | :--- | :--- | :--- |
|  |  |  |  |  |  |  |  |  |  |  |

|  |  |  |  |  |  |  |  |  |  |  |  |
| :--- | :--- | :--- | :--- | :--- | :--- | :--- | :--- | :--- | :--- | :--- | :--- |
|  |  |  |  |  |  |  |  |  |  |  |  |

Housing, food, and other costs vary in different parts of the country, and within different areas of a state. An online budget estimator is helpful in calculating the costs where you live. An example is at http://www.pine-grove.com/online-calculators/budget-calculator.htm. Many others are available.
14. Research the household costs for your area. Use an online budget estimator to find the minimum household budget (total take-home income) needed for a family in your city. Identify the hourly wage needed to meet this budget. Remember to consider the taxes to be paid on income earned.

## Check Your Understanding

15. What taxes are deducted from earnings by most employers?
16. If you earn $\$ 700$ per week, and you have total taxes of $22.65 \%$ taken out by your employer, what is your take-home pay?
17. How does creating a budget help people manage money?

## LESSON 27-1 PRACTICE

18. Give examples of the types of taxes that wage earners pay to federal, state, or local governments.
19. If you earn $\$ 68,000$ per year and you pay total taxes of $32.45 \%$, what is your monthly take-home pay?
20. Calculate total expenses in this budget. Then find the percentage of total expenses for each individual expense. Round percents to the next whole number.

Expenses:
Housing (mortgage/rent) 1280
Property tax (if not included in mortgage) 485
Insurance (home, car, life-medical not withheld 340 by employer)
Food (groceries) 1120
Utilities (electricity, water, gas, trash collection) 260
Cell Phones 130
Cable/internet/land line phone bundle 165
Gasoline for car(s) 230
Child care expenses (day care, tuition, etc.) 500
Pet expenses (food, grooming, and veterinarian care) 120
Credit card charges/payments (average monthly) 530
Entertainment costs (movies, meals, hobbies, etc.) 350
Gifts/Charitable donations 100
Total expenses
21. Using the total expenses in Item 18, calculate the expenses as a percent of take-home pay of $\$ 6780$.
22. Communicate mathematical ideas. With total expenses of $\$ 6,390$ and take-home pay of $\$ 7,450$, how much money is left for savings? What percentage of total income is savings?
23. Identify the fixed and variable expenses in Item 20. Calculate the percentage of the total for each.
24. Use a budget estimator to calculate the hourly wage needed to have family take-home income of $\$ 3600$ per month. Assume total federal taxes of $22.45 \%$ and no state income tax.

## My Notes

|  |  |  |  |  |  |  |  |  |  |  |  |
| :--- | :--- | :--- | :--- | :--- | :--- | :--- | :--- | :--- | :--- | :--- | :--- |
|  |  |  |  |  |  |  |  |  |  |  |  |
|  |  |  |  |  |  |  |  |  |  |  |  |
|  |  |  |  |  |  |  |  |  |  |  |  |
|  |  |  |  |  |  |  |  |  |  |  |  |
|  |  |  |  |  |  |  |  |  |  |  |  |
|  |  |  |  |  |  |  |  |  |  |  |  |

|  |  |  |  |  |  |  |  |  |  |  |  |
| :--- | :--- | :--- | :--- | :--- | :--- | :--- | :--- | :--- | :--- | :--- | :--- | :--- | :--- |

|  |  |  |  |  |  |  |  |  |  |  |
|  |  |  |  |  |  |  |  |  |  |  |

## My Notes

## ACADEMIC VOCABULARY

Net worth is the difference between what is owned and what is owed. Assets are items owned, while liabilities are amounts owed.

|  |  |  |  |  |  |  |  |  |  |  |  |
| :--- | :--- | :--- | :--- | :--- | :--- | :--- | :--- | :--- | :--- | :--- | :--- |
|  |  |  |  |  |  |  |  |  |  |  |  |
|  |  |  |  |  |  |  |  |  |  |  |  |
|  |  |  |  |  |  |  |  |  |  |  |  |

|  |  |  |  |  |  |  |  |  |  |  |
| :--- | :--- | :--- | :--- | :--- | :--- | :--- | :--- | :--- | :--- | :--- | :--- |

|  |  |  |  |  |  |  |  |  |  |  |
| :--- | :--- | :--- | :--- | :--- | :--- | :--- | :--- | :--- | :--- | :--- | :--- |
|  |  |  |  |  |  |  |  |  |  |  |

|  |  |  |  |  |  |  |  |  |  |  |  |
| :--- | :--- | :--- | :--- | :--- | :--- | :--- | :--- | :--- | :--- | :--- | :--- | :--- | :--- |
|  |  |  |  |  |  |  |  |  |  |  |  |

|  |  |  |  |  |  |  |  |  |  |  |  |
| :--- | :--- | :--- | :--- | :--- | :--- | :--- | :--- | :--- | :--- | :--- | :--- |

|  |  |  |  |  |  |  |  |  |  |  |  |
| :--- | :--- | :--- | :--- | :--- | :--- | :--- | :--- | :--- | :--- | :--- | :--- | :--- | :--- |
|  |  |  |  |  |  |  |  |  |  |  |  |

|  |  |  |  |  |  |  |  |  |  |  |  |
| :--- | :--- | :--- | :--- | :--- | :--- | :--- | :--- | :--- | :--- | :--- | :--- | :--- |
|  |  |  |  |  |  |  |  |  |  |  |  |

## Learning Targets:

- Construct a statement of financial net worth.
- Calculate and compare simple and compound interest earnings.
- Analyze and compare sales taxes and various ways to save money on purchases.

Suggested Learning Strategies: Close Reading, Marking the Text, Create Representations

Many families measure their financial progress toward meeting goals by calculating their net worth. To do this, they collect information on everything owned and its current value. This might include a house, a car, savings, and investments in stock or bonds.These items are assets. Most people also owe money to creditors, such as for a mortgage or a car payment. These amounts are liabilities. To create a net worth statement, you first list the value of all the assets, or items owned, and calculate a total. Next, list all the amounts owed, the liabilities, and calculate a total. Subtract the total liabilities from the total assets to find the net worth.

## Example A

Assets:

| House | $\$ 238,000$ |
| :--- | ---: |
| General savings | 48,000 |
| College fund | 28,000 |
| Retirement fund | $\underline{72,000}$ |
| Total Assets | 386,000 |

Liabilities:
Mortgage owed 110,000
Credit card debt $\quad 1,800$
Balance on student loans 23,000
Equity loan for home improvement $\quad \underline{25,000}$
Total Liabilities 159,800
Net Worth:
226,200
Assets - Liabilities $=$ Net Worth
$\$ 386,000-\$ 159,800=\$ 226,200$

## Try These A

a. Calculate the net worth of someone with assets of $\$ 198,000$ and liabilities of $\$ 154,000$.
b. What is the value of assets if someone has a net worth of $\$ 142,500$ and liabilities of 87,400 ?
c. What is the value of liabilities if total assets are $\$ 204,800$ and net worth is $\$ 128,900$ ?

1. Organize the following information, and use it to create a statement of net worth. Use the My Notes space.

House, \$231,160
Credit card debt, \$2,680
Savings account, \$22,500
Car loan, \$14,790
Retirement savings, \$87,600
Balance in checking account, \$12,368
Mortgage loan, \$142,760
Value of second car (no loan), \$4,700
Student loans, \$32,650
A statement of net worth is useful to see how well you are meeting long-term financial goals. For example, you may want to save a certain amount of money for eventual retirement. Checking net worth regularly shows how much of the goal has been met. When planning for long-term savings, it's a good idea to check that you are earning compound interest on your savings instead of just simple interest.

If you have savings that earns simple interest, the interest earnings are calculated once a year.
2. Calculate the simple interest on savings of $\$ 18,470$. Use an annual interest rate of $2.7 \%$.
3. Calculate the simple interest on savings of $\$ 9,028$ invested for six months at a rate of $3.4 \%$.

Savings that earn compound interest will earn more money over a period of time than with simple interest.

## Example B

You have $\$ 10,000$ to invest for 2 years, and you want to calculate and compare simple and compound interest of $4 \%$. Interest is compounded annually.
Step 1: Calculate simple interest.
$10,000 \times 0.04=400$
Step 2: Multiply the interest times 2.
$400 \times 2=800$
Step 3: Calculate compound interest.
$10,000 \times 0.04=400$
Step 4: Add the principal and interest.
$10,000+400=10,400$
Step 5: For year 2, multiply by 4\%.
$10,400 \times 0.04=416$
Step 6: Add the interest earned for 2 years. $\quad 400+416=816$
With compounding, you would earn $\$ 16$ more than with simple interest. If the interest is compounded more often, such as semiannually, quarterly, or monthly, the earnings would be higher.

## My Notes

|  | - |  |  |  |  |  |  |  |  |
| :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: |
|  |  |  |  |  |  |  |  |  |  |
|  |  |  |  |  |  |  |  |  |  |
|  |  |  |  |  |  |  |  |  |  |
|  |  |  |  |  |  |  |  |  |  |
|  |  |  |  |  |  |  |  |  |  |
|  |  |  |  |  |  |  |  |  |  |
|  |  |  |  |  |  |  |  |  |  |

|  |  |  |  |  |  |  |  |  |
| :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: |
|  |  |  |  |  |  |  |  |  |
|  |  |  |  |  |  |  |  |  |
|  |  |  |  |  |  |  |  |  |
|  |  |  |  |  |  |  |  |  |
|  |  |  |  |  |  |  |  |  |
|  |  |  |  |  |  |  |  |  |
|  |  |  |  |  |  |  |  |  |
|  |  |  |  |  |  |  |  |  |
|  |  |  |  |  |  |  |  |  |
|  |  |  |  |  |  |  |  |  |

## MATH TIP

Remember that the formula for simple interest is $\mathrm{I}=\mathrm{R} \times \mathrm{T}$ (Interest $=$ Rate times Time).

## ACADEMIC VOCABULARY

A compound interest on savings is paid more than once a year, thus earning interest on the interest paid each compounding period.

## ACADEMIC VOCABULARY

A monetary incentive is a special offer that reduces the total cost of one or more items, such as "buy one, get one free." A coupon is a document offering a reduction in price on a specific item, such as a box of cereal.

## ACADEMIC VOCABULARY

A rebate is a sales promotion used as an incentive to get buyers to purchase a specific product.

## Try These B

a. Use simple interest and compound interest of $3 \%$ to compare the earnings on savings of $\$ 20,000$ invested for two years.
b. Explain how compound interest results in higher earnings on savings over a period of years.

One way to increase savings is to find ways to reduce monthly costs. There are several ways to reduce costs. Turning out lights or using less water each month can reduce utility costs. Waiting to buy items when they're on sale can reduce costs for many household needs, such as furniture, clothing, and food.
4. Your local store has a sale with $20 \%$ off your favorite jeans. If the jeans are regularly priced at $\$ 39.98$, what is your sale price? How much would you save?

Another method that stores use to get customers to buy items is to offer a monetary incentive.
5. Suppose your family's favorite restaurant is offering an incentive of one meal at the regular price and the second one at half price. If both meals regularly cost $\$ 8.50$, how much would you pay? What is the savings?

Stores may use coupons to get customers into their stores. Grocery stores often use coupons that give a discount of a specific amount of money, such as 50 cents, on the price of an item.
6. Your family shops at a local grocery that offers coupons on many different items. On one shopping trip, your family redeems coupons on 5 items for the following amounts: $\$ 0.35, \$ 0.50, \$ 0.75, \$ 1.00$, and $\$ 0.60$. What is the total savings?
7. Some coupons offer "two for one" deals where you get two items for cost for a second sweater?

Some manufacturers use rebates to get customers to buy their products. For example, a local store offers a television set for $\$ 699$ after a rebate of $\$ 100$. The manufacturer of the television will send the buyer $\$ 100$ for purchasing that television. As the buyer, you would pay the full price of the television (\$799 in this example) and then send the rebate request to the manufacturer to receive the $\$ 100$.

Most rebates are mail-in rebates. You will need to mail in the rebate coupon and a receipt for the purchase to obtain the amount of the rebate. It can take a few months to receive the money on a rebate. Rebates often have time limits on them, so it is important to mail in coupons and receipts soon after a purchase.

Some stores offer "instant rebates", in which case the amount of the rebate is taken off the price of the item at the time of purchase.
8. Suppose you buy a bicycle that has a manufacturer's rebate of $\$ 50$. The bicycle costs $\$ 179.97$ before the rebate. How much will you pay for the bicycle at the store? After the rebate?
9. The local hardware store is offering an instant rebate of $\$ 25$ on all purchases over $\$ 150$. If you bought items for $\$ 45, \$ 78$, and $\$ 12$, what would be the amount of your rebate?

## Check Your Understanding

10. Explain what a statement of net worth is and the information on it.
11. Explain simple and compound interest and compare the benefits of one over the other.
12. Describe and compare incentives offered to customers to get them to buy products.

## LESSON 27-2 PRACTICE

13. Use the following information to create a statement of net worth.

House (net value), \$122,600
Credit card debt, \$1,675
Savings account, \$34,500
Car loan, \$12,680
Retirement savings, \$78,700
Balance in checking account, \$13,686
Mortgage loan, $\$ 153,440$
Value of second car (no loan), \$5,400
Student loans, \$28,520
14. Communicate reasoning. Why might a statement of net worth be useful?
15. Calculate simple interest on $\$ 7,000$ at $3.2 \%$ for a year.
16. Calculate compound interest on $\$ 4,500$ for 2 years at $4 \%$, compounded semiannually.
17. Calculate and compare simple interest and compound interest of $5 \%$ on the amount of $\$ 12,000$ for 5 years.
18. Calculate savings on a purchase of $\$ 59.98$ with $15 \%$ off.
19. Using coupons worth $\$ 0.40, \$ 0.60, \$ 1.25, \$ 0.75$, and $\$ 0.50$, how much would you save if you bought the related products?
20. Describe the difference between a rebate and an incentive to "buy one, get one free."

## ACTIVITY 27 PRACTICE

1. List the federal taxes that are usually withheld from paychecks.
2. If you earn $\$ 49,400$ a year, what amounts of federal taxes would be withheld?
3. Your local city taxes income at $1.5 \%$. If you earn $\$ 42,680$, how much would you pay in taxes to your city?
4. Research the typical household expenses for your area. Then create a budget to meet those expenses? How much money would you need to earn, either as a salary or an hourly wage, to pay these expenses? Remember to include taxes on the earned income.
5. Create a budget using the following information:

Housing (mortgage/rent) 1170
Interest earned on savings (monthly) 78
Salary (take-home pay) 5,120
Insurance (home, car, life-medical not withheld by employer)
Food (groceries) ..... 910
Utilities (electricity, water, gas, trash collection) ..... 245
Cell Phones ..... 110
Cable/internet/land line phone bundle ..... 155
Gasoline for $\mathrm{car}(\mathrm{s})$ ..... 190
Child care expenses (day care, tuition, etc.) ..... 550
Savings for retirement ..... 350
Credit card charges/payments (average monthly) ..... 430
Entertainment costs (movies, meals, hobbies, etc.) ..... 250
Gifts/Charitable donations ..... 150
Savings for college ..... 400
6. Explain the difference between fixed and variable expenses. How can they be used to change monthly costs?
7. Use the following information to create a statement of net worth:

| House | $\$ 293,000$ |
| :--- | ---: |
| General savings | 68,000 |
| College fund | 39,000 |
| Retirement fund | 92,000 |
| Car | 12,500 |
| Mortgage owed | 134,600 |
| Credit card debt | 1,940 |
| Balance on student loans | 18,670 |
| Equity loan for home improvement | 30,000 |

8. Calculate and compare simple and compound interest of $4.2 \%$ on savings of $\$ 15,000$ for 10 years.
9. Calculate $25 \%$ savings on a purchase of $\$ 68.98$.

## MATHEMATICAL PRACTICES

## Communicate Mathematical Ideas

10. Explain how using a monthly budget and calculating net worth are used to help plan for and meet long-term financial goals.
