Understanding Variables-Scientific Method

Variables are factors that have an impact on the result of an experiment. For instance, how well you do on a test depends on the amount of sleep you've had, whether you had breakfast, how long you've studied and so on.

1. What variables can affect the performance of a marathon runner?

_____

_____

_____

2. What variables can affect attendance at a soccer match?

_____

_____

_____

3. What variables can affect the number of fowers on a plant?

_____

_____

_____
